

PROJECT UPDATE

October 2015

GREEN LIGHT TO FINALISE FLOOD PLAN

The proposed stormwater management plan to mitigate flood risks across the Brown Hill Keswick Creek catchment will now be finalised for approval by South Australia's Stormwater Management Authority following unanimous agreement of the plan amongst the project's five catchment councils.

The Brown Hill Keswick Creek Stormwater Project – which is a collaboration between Adelaide, Burnside, Mitcham, Unley and West Torrens councils – now looks forward to working with the State Government and the Stormwater Management Authority to progress the implementation of all the proposed flood mitigation works.

Full implementation of the plan is subject to approval from the Stormwater Management Authority and funding assistance from the State and Federal Governments.
