

PROJECT UPDATE

March 7, 2016

FUNDING CRUCIAL FOR FLOOD PLAN

The overriding objective of the Brown Hill Keswick Creek Stormwater Project's Stormwater Management Plan (SMP) is to significantly reduce the flooding risk to thousands of homes and businesses across metropolitan Adelaide.

To achieve this, funding assistance is required to implement the proposed flood mitigation works in the SMP.

The project has developed the following brochure for government representatives, which reiterates the need for costs to be evenly shared between the three spheres of government – local, State and Federal.

The project's five catchment councils have already agreed on their apportionments for the local government share of the cost, with funding support from State and Federal Governments critical for proposed works to be fully implemented.

Read the brochure [here](#).
