Brown Hill Keswick Creek Stormwater Project Update

Dear resident,

Over 150 metres of channel has been excavated and lined with a protective layer of concrete and the first sections of new concrete base slab have been poured. Construction of the new concrete walls has commenced, and a series of temporary weirs and pump systems has been installed to enable the construction of the new channel to continue during minor rainfall events.

The precast box culverts have been installed at Watson Avenue and the backfilling and construction of the road pavement will be undertaken in conjunction with the channel works over the coming months. The north-eastern corner of the intersection will soon be re-opened to enable local traffic to access Beare Avenue from Watson Avenue. The intersection will remain closed to through-traffic until October 2023.

These works are being managed on behalf of the Brown Hill and Keswick Creeks Stormwater Board.
